A leading independent research scientist, in Ireland, has today called for an end to the censorship endemic in the Irish scientific community. Professor Brian G. Mc Enery, a global leader in the field of Educational Systems, Research and Development, has said that he has endured 21 years of censorship at the hands of policy makers within the Department of Education, and various educational institutions funded by the Irish state. He said the censorship was very subtle, with his attempts to interact with various institutions simply being ignored, or treated dismissively.

According to Professor Mc Enery, this became more readily apparent after his launch, in 1996, of the Irish Campaign to Ban Genetically Modified Foods. The message that was being sent out to other scientists, was tow the line or be made a pariah. This treatment has made it impossible for Professor Mc Enery to source any funding for his primary area of research, which is to develop strategies to alleviate the current crisis in mathematical education. According to Professor Mc Enery the current flavour of the month, *Project Maths*, is a disaster waiting to happen.

His research and development interests have also included the development of *acoustic graphics*, a system with the potential to manage the global flow of financial information in a coherent and timely way, the design of a *tachyon computational device* with the ability to transcend the speed of light in computation and instant messaging, a complete review of the research on the *Maharishi Effect* providing a verifiable means of conflict prevention and the re-development of the ability to use the Irish language as a language of science and technology with initial focus in *computational physics*.

According to Professor Mc Enery one of his projects has the potential to create thousands of jobs globally over the next five years, but due to the attitude of state funded institutions in Ireland his *Language Core Programming* project will never get the support it needs.

This censorship has also affected his personal life with him unable to make a proper living in Ireland since 1992. No mater what institution he approached, no matter what public body he approached for assistance in funding, the result was always

consistently in the negative. This suggests that every institution was guilty of breaching Article 45.2.1 of the [Constitution of Ireland](#).

Right at this moment in time Professor Mc Enery has expended the last of his personal resources, €50,000 in the last three years alone, and is currently without adequate food and shelter. He has sent an urgent appeal to the government for immediate action on his behalf, and has asked for an immediate stipend of €10,000 from the Taoiseach's emergency fund. The deadline for this is 13.00 today.

Personal Request to Journalists

Hi there,

my situation is very real. I have not had a decent meal in two to three weeks, and I currently owe for a weeks rent in the hostel where I am. I have no money or prospect of money for three weeks. I am not looking for charity, I am looking for my right to make a living in this country to be vindicated.

The censorship continues to this day. Within the last three weeks I was censored by the Irish Research Council on their LinkedIn group. I have also been censored by the Irish Defence Forces Officer Club on their LinkedIn group.

This is a very serious issue, and needs to be highlighted today.

Thank you,

Brian G.

Professor Brian G. Mc Enery
Hereditary King of the Irish Nation
